

## A B S T R A C T

The invention relates to a soundproofing panel comprising an "exciter" wall for putting into contact  
5 with a fluid in which there is a source of noise, and a  
"receiver" wall for putting into contact with a fluid in  
which it is desired to attenuate noise, the panel  
including between said two walls an intermediate element.  
In the panel, the intermediate element is held on at  
10 least a portion of its outline by means of at least one  
flexible element disposed between the intermediate wall  
and the receiver wall.
